# Enamel Shaping

If your teeth are chipped and ragged due to age, trauma and/or grinding (bruxism) , we can help smooth those rough edges, usually without any numbing or anesthetic. Enamel shaping recontours the outer "shell" of enamel giving a more youthful and smooth appearance. We can shave micrometers off; and we will advise you if we need to reduce (enamel shaping) or add to your teeth with composite bonding for the appearance you desire!
